LightMe OpenCall | M24 Meeting 2nd Training activity | New youtube channel

### LightMe OpenCall

In the framework of the LightMe EC project (<http://lightme-ecosystem.eu/>) we are organizing an Open Call for provision of services to SMEs, Large Enterprises, or other stakeholders in order to support them in the upscaling and technology maturity of novel concepts in the field of lightweight alloys (aluminum, magnesium and titanium) and their composites.

#### Watch the LightMe Open Call video

The goal of the Open Call is to receive proposals from applicants and after an evaluation process, host free of charge, 8 new test cases. The applications should concern propositions for upscaling novel concepts in the field of lightweight metals and composites, utilizing one or more of the Ecosystem's pilot lines. The proposals should briefly describe the current technical status of the concept and what is required for the upscaling process, covering also the other services provided by the Ecosystem. Additionally, the innovation and market perspective of the concept should be described. Guidelines for the proposal preparation may be found [HERE](#).

The call is open to legal entities registered in EC or EC affiliated countries having the status of private for-profit entity (Small & Medium Enterprises or Large Enterprises). Additional small consortia of private for-profit entities including Research Organizations (Public or Private) are eligible for applications.

On the 11<sup>th</sup> February LightMe organized an Online event to present LightMe Open Call. The event focused on the LightMe Ecosystem concepts and what this Ecosystem can offer to companies. The LightMe Pilot Lines and the services were presented. Event: <https://www.youtube.com/watch?v=b-9C2wAwZgk&t=6301s>

### M24 Project Meeting

LightMe partners gathered on February 2<sup>nd</sup> and 3<sup>rd</sup> for the M24 project Meeting!

The last updates of the Pilot Lines, the status of the NPO and also the Open Call were some of the topics of discussion for this 2-day meeting.

With the pandemic still ongoing, the online meetings are still the way partners discuss and meet. Besides the current health emergency, important results are being achieved through the last project activities.

Following the M24 project meeting, on the 11<sup>th</sup> of February the consortium had the 2<sup>nd</sup> Internal Training activity focusing in Business Plan and Innovation Management. The activity was conducted by AXIA.

The training activity was held online and the MIRO platform was used for the interactive session of the training.

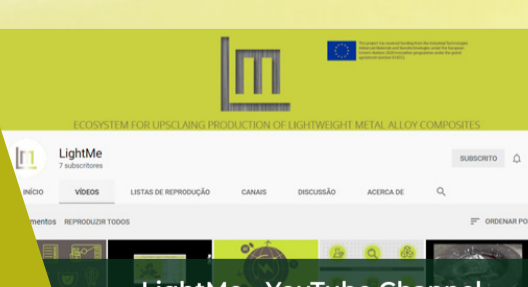

The interactive session included the creation of a Business Model Canvas of the LightMe project from two different perspectives: that of the core partners and that of the end users (project's test cases).

### YouTube Channel

LightMe has a new YouTube channel!

Through this channel it will be possible to promote the project activities in a more active way. The channel has already videos about:

- What is LightMe
- Impacts of LightMe
- Open Call
- Open Call event
- Test case
- 2 PL videos
